Metric DIN 7996 phillips round head wood screws are the preferred fasteners used to attach wood to wood or hardware to wood. The aggressive self tapping part thread with a sharp point allows for effective penetration and gripping in the wood to form strong joints. The round head is a domed head with a high crown with room for a deep recess. The diameter of the head is less than a pan head. The Phillips (cross recessed) drive is cross-shape self-centering design that keeps it in place when you apply force from a drill while camming out if too much force/toque is applied. Unique Fasteners offers over 500,000 unique fastener products from stock in inch and metric standard in a variety of materials and finishes. The following sizes of DIN 7996 phillips round head wood screws are available for immediate shipping from stock: Diameters ranging from M3 to M6 up to lengths of 100mm in stainless steel A2 and A4.

DIN (**D**eutsches **I**nstitut für **N**ormung - German Institute for Standardization) standards are issued for a variety of components including industrial fasteners as Metric DIN 7996 phillips round head wood screws. The DIN standards remain common in Germany, Europe and globally even though the transition to ISO standards is taking place. DIN standards continue to be used for parts which do not have ISO equivalents or for which there is no need for standardization.
