All measurements are in mm

Metric DIN 7 parallel dowel pins are solid cylindrical rods made of a variety of materials that are used to strongly and accurately join two or more objects together. Parallel dowel pins are able to join parts together by frictional forces between the pin and material into which it is inserted. In order to keep the assembled parts aligned, the dowel pin must be rigid and fit tightly into the pre-drilled holes of the mating parts. UNIQUE Fasteners offers over 500,000 unique fastener products from stock in inch and metric standard in a variety of materials and finishes. The following sizes of DIN 7 parallel dowel pins are available for immediate shipping from stock: Diameters ranging from M5.5 to M25 up to 120mm long in hardened steel and stainless steel A1 and stainless steel A4.

DIN (Deutsches Institut für Normung - German Institute for Standardization) standards are issued for a variety of components including industrial fasteners as Metric DIN 7 dowel pins. The DIN standards are commonly used in Germany, Europe and globally even though the transition to ISO standards is gradually taking place. DIN standards continue to be used for parts which do not have ISO equivalents. The ISO equivalent for DIN 7 parallel dowel pins is ISO 2338.
