Metric DIN 97 Slotted Flat Countersunk Wood Screws are the preferred fasteners used to attach wood to wood or hardware to wood. The aggressive self tapping part thread with a sharp point allows for effective penetration and gripping in the wood to form strong joints. The round head is a domed half spherical shaped head. Since they are domed and not countersunk, the entire head will show and can be used only when the heads are permitted to protrude from the surface. The slotted drive is a simple slot cut into the outer surface of the head for a flat blade slot screw driver. UNIQUE Fasteners offers over 500,000 unique fastener products from stock in inch and metric standard in a variety of materials and finishes. The following sizes DIN 97 Slotted Flat Countersunk Wood Screws are available for immediate shipping from stock: Diameters ranging from M3 to M8 up to 100mm long in stainless steel A2 and A4.

DIN (**D**eutsches **I**nstitut für **N**ormung - German Institute for Standardization) standards are issued for a variety of components including industrial fasteners as Metric DIN 97 Slotted Flat Countersunk Wood Screws. The DIN standards remain common in Germany, Europe and globally even though the transition to ISO standards is taking place. DIN standards continue to be used for parts which do not have ISO equivalents or for which there is no need for standardization as DIN 97 Slotted Flat Countersunk Wood Screws.
